

Guardsman and Sentry Box

Use masking tape (such as 3M 2cm wide tape) to make the basic figure from paper tubes and crumpled paper.

A shell for the bearskin was cut to fit the head, from a shape made by covering a balloon with several layers of glued paper. This was painted black and tufts of wool were glued on with a hot glue gun.

A cardboard roof was made for the sentry box. An arch was cut in the front; the figure and the sentry box were painted white before applying colours.

Basic colours were applied to the figure.

The extra length of jacket and final details were applied to make a smart Coldstream Guard.

The finished sentry box completes the project.

The photographs above show how an empty vacuum cleaner box became a sentry box for a Coldstream Guard.
